SUMMARY

Operations leader who deploys AI inside real business workflows — and knows where it doesn't belong. As Databricks' first Partner Strategy & Ops hire, built the partner data foundation, then put LLM reporting agents into production on top of it. Independently designed and shipped a full agent operating system (Claude Code) for a partner-ops function: session-boot context hooks, invocable skills, and a golden-tested boundary that keeps models out of the money path.

SKILLS

AI systems: Claude Code (skills, hooks, subagents, scoped permissions), LLM workflow design, agent evals & golden-test patterns

Data: Python (pandas, NumPy), PySpark, SQL, Salesforce & Einstein Analytics, Tableau, Excel/GSheets

EXPERIENCE

Partner Strategy & Ops Manager — Databricks (*promoted Feb 2023 · first Partner S&O hire*) Aug 2021 – Present

- Deployed AI reporting agents (Newsletter Agent, FAQ Agent) for automated Q&A, insights, and notifications — integrating LLM workflows into how partner metrics are distributed across the org.
- Built the standardized partner datasets those agents run on — adopted company-wide and powering 10+ executive and team dashboards.
- Scaled partner attribution systems in Salesforce, SQL, and Spark to track bookings, consumption, and pipeline across a two-sided marketplace.
- Designed the Partner Executive and Partner Scorecard dashboards — the single source of truth for Partner Sales and ecosystem health.
- Shaped the Partner Value Score and partner tiering framework, earning global alignment and executive adoption.
- Led the annual quota-setting process, aligning Sales, Finance, and Partner leadership through top-down and bottoms-up planning.

SMB Sales Strategy & Operations Analyst — Salesforce Jul 2019 – Aug 2021

- Automated reporting and forecasting tooling with Python, APIs, and G Suite — QBR decks, forecast-accuracy tracking, and account/territory data pulls.
- Developed the territory-carving Python script that encoded the org's sales guiding principles, personnel, and accounts — the basis of the GTM plan.
- Led the business unit's Tableau migration through enablement and data governance; direct analytics partner to the \$250M AMER SMB Central business.

Business Data Analyst — CBRE Sep 2018 – Jul 2019

- Managed the product data warehouse; built Python web-scraping tools and client-facing Tableau dashboards.
- Spearheaded streamlining of the product analytics process — defining key metrics, the dataset, and the flow to visualization.

SELECTED PROJECT

Claude Code as an Operating System — agentic infrastructure for partner ops (public build, 2026) —

github.com/dylan3796/anthropic-portfolio

- Designed a five-layer agent operating system: persistent memory, SessionStart hooks that boot every session with live plan and scorecard context, long-horizon plans, invocable skills, and a retro loop that proposes edits to its own setup.
- Drew the AI/deterministic boundary for commissions crediting: an agent codifies managers' plain-English coverage changes into effective-dated rules; a golden-tested Python engine applies them to deals — no LLM ever computes a credited dollar.
- Shipped scoped domain skills (/commissions-credit, /partner-qbr, /call-notes-to-jira), a plan-drafting subagent, least-privilege permissions, and a Streamlit walkthrough of the architecture.

EDUCATION

University of California, Santa Barbara — B.A. Economics & Accounting · Dean's Honors
