SUMMARY

Sets up how an organization actually deploys AI — from the foundational data layer to KPI alignment to the self-serve enablement that gets non-technical teams building. At Databricks, spearheading the partner team's AI strategy on top of a data foundation built from scratch, and shipped its first LLM agents to production. Independently designed a full agent operating system in Claude Code — skills, hooks, subagents, MCP, and a tested boundary between AI judgment and deterministic execution: built-and-deployed AI work, not slideware.

SKILLS

AI deployment & enablement: Agent operating systems (Claude Code, CLAUDE.md, MCP), LLM workflow design, prompt engineering, evals, self-serve enablement, playbooks & standards

Data & ops: SQL, Python (pandas), PySpark, Tableau, Salesforce, medallion architecture, KPI definition, executive reporting

EXPERIENCE

Partner Strategy & Ops Manager — Databricks (*promoted Feb 2023 · first Partner S&O hire*) Aug 2021 – Present

- Spearheading the partner team's AI strategy — building the foundational data-and-AI layer (a medallion architecture) and aligning KPIs across internal, external, and partner stakeholders as the backbone every AI output measures against.
- Building self-serve analytics spaces so the team and its stakeholders answer their own questions — turning a standing request queue into direct access.
- Deployed the team's first LLM agents (Newsletter, FAQ) into production for automated Q&A, insights, and notifications, reaching *《N stakeholders》*.
- Designed the partner attribution model and the first revenue forecasting process — the governed data the AI layer depends on.
- Shaped the Partner Value Score and tiering framework adopted globally.

SMB Sales Strategy & Operations Analyst — Salesforce Jul 2019 – Aug 2021

- Automated reporting and forecasting tooling with Python, APIs, and G Suite — QBR decks, forecast accuracy, and territory data.
- Developed the territory-carving Python model behind the annual GTM plan; led the unit's Tableau migration with data governance.
- Direct analytics partner to the \$250M AMER SMB Central business.

Business Data Analyst — CBRE Sep 2018 – Jul 2019

- Managed the product data warehouse and built Python data-collection tools.
- Built client-facing Tableau dashboards; streamlined the product-analytics process end to end.

SELECTED PROJECT

Claude Code as an Operating System — a reference build for deploying AI in a function (public repo, 2026) —

github.com/dylan3796/anthropic-portfolio

- Designed a five-layer operating model for running AI in a team: governed data and a single metric dictionary, memory, long-horizon plans, invocable skills, and a self-improvement loop — define once, reuse everywhere.
- Set the boundary that makes AI trustworthy in production: the model authors rules in plain English; deterministic, tested code executes anything that touches money — the speed of language with the trust of a spreadsheet that can't miscount.
- Built the enablement pattern: the ops team self-served first, then began authoring their own skills — reusable playbooks and standards, the adoption unlock these roles are hired to drive.

EDUCATION

University of California, Santa Barbara — B.A. Economics & Accounting · Dean's Honors
