SUMMARY

The operating spine of a GTM org. As Databricks' first Partner Strategy & Ops hire, built the forecast, attribution, and first new-logo incentive programs from scratch, ran annual quota-setting across Sales, Finance, and Partner leadership, and now sets the AI strategy that makes the team faster. Architects the high-level plan, operationalizes it, and dives into the detail — seven years partnering directly with GTM executives at Databricks, Salesforce, and CBRE.

SKILLS

Operations & strategy: Operating cadence, annual & quota planning, OKRs, territory design, incentive/comp program design, revenue forecasting, executive & board reporting

Data & AI: SQL, Python (pandas), PySpark, Tableau, Salesforce, revenue attribution, deployed AI agents, AI enablement (Claude Code)

EXPERIENCE

Partner Strategy & Ops Manager — Databricks (*promoted Feb 2023 · first Partner S&O hire*) Aug 2021 – Present

- Built the partner team's first revenue forecasting process where none existed — 《what it forecasts + scale, e.g. \$XXXM quarterly partner-sourced》.
- Designed the canonical partner attribution model — 《adoption, e.g. company-wide source of truth across N teams》 — defining sourced, influenced, and attributed revenue across a two-sided marketplace.
- Launched the first partner incentive program tied to new-logo acquisition — 《what it rewards + impact, e.g. drove N net-new logos》.
- Led annual quota-setting across Sales, Finance, and Partner leadership through top-down and bottoms-up planning.
- Shaped the Partner Value Score and tiering framework, earning global alignment and executive adoption.
- Now spearheading KPI alignment across internal, external, and partner stakeholders and building self-serve, AI-driven analytics — the operating cadence's modern layer.

SMB Sales Strategy & Operations Analyst — Salesforce Jul 2019 – Aug 2021

- Direct business partner to the \$250M AMER SMB Central business, advising AVPs, VPs, and RMs across the org.
- Built the territory-carving model (Python) that encoded the org's guiding principles — the basis of the annual GTM plan.
- Crafted the FY22 GTM guiding-principles analyses: customer continuity, account proximity, industry mix, top accounts, AE tenure.

Business Data Analyst — CBRE Sep 2018 – Jul 2019

- Owned the product-analytics stack end to end — data warehouse, Python data collection, and client-facing Tableau dashboards.
- Streamlined the product-analytics process: defined key metrics, the dataset, and the flow to visualization.

SELECTED PROJECT

Claude Code as an Operating System — running an AI-native operating cadence (public repo, 2026) —

github.com/dylan3796/anthropic-portfolio

- Built a working operating system for a function: big rocks as the planning pillars, skills as the repeatable plays, a metric dictionary as governance, and a retro loop that runs the QBR on the tooling itself.
- Headline workflow — commissions crediting: an agent codifies managers' plain-English coverage changes into effective-dated rules, and tested code, never a model, computes the money.

EDUCATION

University of California, Santa Barbara — B.A. Economics & Accounting · Dean's Honors
